

## Akuvox Cloud Intercom Solution for Package Room

With online shopping booming, property managers of multifamily buildings are being overwhelmed with the burgeoning number of package deliveries. They spend lots of time taking in deliveries and keeping them safe every day. Akuvox's smart package room solution eliminates the apartment package hassle.

# How It Works

### Step 01

Property managers create a package room access PIN for the delivery person.

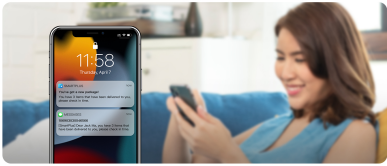

### Step 02

The courier uses the PIN to access the room, find residents' names and enter the package quantity, then he drops off packages.

### Step 03

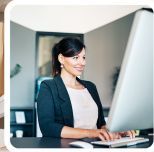

Residents receive an app push notification or an SMS notification about the delivery and pick up the parcel later.

# Features & Benefits

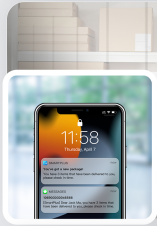

### Automated Package Management Saves Time for Property Managers

The delivery requires the slightest assistance from property managers. After getting the PIN, the courier can access the package room, which is open 24/7, and drops off the package all by himself.

### Package Security and Visibility Leads to More Satisfied Residents

Parcels are kept safe in the package room secured by the Akuvox door phone, whose camera also keeps a tab on who enters the room. Residents are instantly notified of the package arrivals and can pick them up at their convenience.

### Contactless Package Delivery Helps Build a Safer Community

From room access to the parcel pickup, the solution requires as little person-to-person contact as possible. This helps prevent the spread of pathogens like the coronavirus.
